

**AMENDMENTS TO THE CLAIMS**

The listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (Currently Amended) A computer implemented method comprising:

grouping a first set of elements, selected from a plurality of elements, into a first container, wherein each of the plurality of elements and the first container are adapted to be displayed on a display device;

grouping a second plurality of elements, selected from the plurality of elements, into a second container, wherein the second container is adapted to be displayed on the display device;

associating a first set of element properties, selected from a plurality of element properties, to the first container and a second set of element properties, selected from the plurality of element properties, to the second container, wherein at least one of the plurality of element properties is an excluded environment identifier;

~~retrieving a plurality of element properties corresponding to a plurality of elements, wherein the elements are adapted to be displayed on a display device, and wherein the element properties of at least one of the elements includes one or more excluded environment identifiers;~~

identifying one or more display environment identifiers corresponding to the display device, wherein a first display environment identifier corresponds to a size of a display screen of the display device;

comparing the display environment identifiers with the ~~excluded environment identifiers~~ first set of element properties and the second set of element properties;

in response to the comparing, determining that a ~~first element~~ the first container has a first excluded environment identifier that matches the first display environment identifier for the display device;

in response to the comparing, determining that a ~~second element~~ the second container does not have any excluded environment identifiers that match the first display environment identifier for the display device; and

in response to the determinations, displaying, on the display device, one or more of the elements, wherein the first ~~element is~~ container and the first set of elements are not displayed and wherein the second ~~element is~~ container and the second set of elements are displayed.

2. (Canceled)
3. (Canceled)
4. (Previously Presented) The method of claim 1 further comprising:  
registering one or more renderer keys at the display device.
5. (Original) The method of claim 4 further comprising:  
executing a rendering software application on the display device, wherein the rendering software application registers the renderer keys.
6. (Original) The method of claim 1 wherein at least one of the elements is selected from the group consisting of an image, an audio file, a table, a table column, a table row, a caption, a text block, a graphical user interface control, a page in a property notebook, and a wizard.
7. (Currently Amended) An information handling system comprising:  
one or more processors;

a memory coupled to the processors;

a nonvolatile storage device;

a display device accessible from the processors;

first grouping logic for grouping a first set of elements, selected from a plurality of elements, into a first container, wherein each of the plurality of elements and the first container are adapted to be displayed on the display device;

second grouping logic grouping a second plurality of elements, selected from the plurality of elements, into a second container, wherein the second container is adapted to be displayed on the display device;

association logic for associating a first set of element properties, selected from a plurality of element properties, to the first container and a second set of element properties, selected from the plurality of element properties, to the second container, wherein at least one of the plurality of element properties is an excluded environment identifier;

~~retrieval logic for retrieving a plurality of element properties corresponding to a plurality of elements, wherein the elements are adapted to be displayed on the display device, and wherein the element properties of at least one of the elements includes one or more excluded environment identifiers;~~

identification logic for identifying one or more display environment identifiers corresponding to the display device, wherein a first display environment identifier corresponds to a size of a display screen of the display device;

comparison logic for comparing the display environment identifiers with the ~~excluded environment identifiers~~ first set of element properties and the second set of element properties;

first determination logic for determining that a ~~first element~~ the first container has a first excluded environment identifier that matches the first display environment identifier for the display device;

second determination logic for determining that a ~~second element~~ the second container does not have any excluded environment identifiers that match the first display environment identifier for the display device; and

display logic for displaying, on the display device, one or more of the elements in response to the determinations, wherein the first ~~element is~~ container and the first set of elements are not displayed and wherein the second ~~element is~~ container and the second set of elements are displayed.

8. (Canceled)
9. (Canceled)
10. (Previously Presented) The information handling system of claim 8 further comprising:  
  
registration logic for registering one or more renderer keys at the display device.
11. (Original) The information handling system of claim 10 further comprising:  
  
execution logic for executing a rendering software application on the display device, wherein the rendering software application registers the renderer keys.
12. (Original) The information handling system of claim 8 wherein at least one of the elements is selected from the group consisting of an image, an audio file, a table, a table column, a table row, a caption, a text block, a graphical user interface control, a page in a property notebook, and a wizard.
13. (Currently Amended) A tangible computer storage medium, the computer storage medium containing instructions for execution by a computer, which, when executed by the computer, cause the computer to implement a method comprising:

grouping a first set of elements, selected from a plurality of elements, into a first container, wherein each of the plurality of elements and the first container are adapted to be displayed on a display device;

grouping a second plurality of elements, selected from the plurality of elements, into a second container, wherein the second container is adapted to be displayed on the display device;

associating a first set of element properties, selected from a plurality of element properties, to the first container and a second set of element properties, selected from the plurality of element properties, to the second container, wherein at least one of the plurality of element properties is an excluded environment identifier;

~~retrieving a plurality of element properties corresponding to a plurality of elements, wherein the elements are adapted to be displayed on a display device, and wherein the element properties of at least one of the elements includes one or more excluded environment identifiers;~~

identifying one or more display environment identifiers corresponding to the display device, wherein a first display environment identifier corresponds to a size of a display screen of the display device;

comparing the display environment identifiers with the ~~excluded environment identifiers~~ first set of element properties and the second set of element properties;

in response to the comparing, determining that ~~a first element~~ the first container has a first excluded environment identifier that matches the first display environment identifier for the display device;

in response to the comparing, determining that ~~a second element~~ the second container does not have any excluded environment identifiers that match the first display environment identifier for the display device; and

displaying, on the display device, one or more of the elements, wherein the first ~~element is~~ container and the first set of elements are not displayed and wherein the second ~~element is~~ container and the second set of elements are displayed.

14. (Canceled)
15. (Canceled)
16. (Previously Presented) The computer storage medium of claim 13 wherein the method further comprises:  
  
registering one or more renderer keys at the display device.
17. (Currently Amended) The computer storage medium of claim 16 ~~further~~ wherein the method further comprises:  
  
executing a rendering software application on the display device, wherein the rendering software application registers the renderer keys.
18. (Previously Presented) The computer storage medium of claim 13 wherein at least one of the elements is selected from the group consisting of an image, an audio file, a table, a table column, a table row, a caption, a text block, a graphical user interface control, a page in a property notebook, and a wizard.
